INFOBLOX HEALTH CHECK

# Elevate Your Customers' Infoblox Performance

## Service Overview

---

DNS, DHCP, and IP Address Management play a critical role in each customer's highly connected organisation – every service, application, and device depends on it. To ensure maximum uptime, operational efficiency, security, and accelerated innovation, it's important to periodically review the status of your customers' Infoblox deployments, ensuring alignment against their evolving business needs.

---

## Our complimentary Health Check service provides:

---

- **Verification** that each customer's solution is fully implemented, provides value, and remains fit for purpose with changing company goals.
  - **An Optimised Plan** with best practices and recommendations each customer can implement to enhance their deployment to get the most out of their existing Infoblox solution.
  - **Expert Advice** about the most up-to-date industry trends and new features to help customers reach an improved ROI.
- 

## How It Works:

---

In collaboration with one of our experts, an alignment meeting and data-gathering session will be conducted to assess the deployment. This multi-faceted review is conducted to cover all areas of the deployment and how well it performs in relation to technical and business requirements. After data gathering, a dedicated session will be scheduled to deliver custom insights and tailored recommendations, accompanied by a comprehensive, post-assessment report.

---

## Key Areas of The Health Check:

---

As part of the Health Check, we assess key areas such as configuration, policies, utilisation, performance, and disaster recovery/high availability architecture. All of this is reviewed comparatively to best practices and optimal design based on each customer's unique needs. It enables a proactive approach, highlighting any early warning signs, risks, or areas for immediate improvement.

## Post-Health Check Support:

---

After the Health Check is complete, we will provide a detailed report to capture the current state of the deployment, areas for improvement, including a prioritised list of action items, and any opportunities for optimising based on current and future requirements.

---

**Don't let suboptimal network performance hold your customer's business back. Schedule an Infoblox Health Check today and unlock the full potential of your customer's network.**
